Our Story

Established in the West Midlands, Jones and Woolman UK has been providing a variety of roofing penetration, weathering, and GRP Moulding solutions since 1979. Over the years, we have completed contracts for commercial clients throughout the UK and Ireland, as well as globally.

Projects have ranged from individual shops, through to large-scale developments such as shopping centres, social housing, factories and sports arenas.

We've worked hard to gain a reputation for excellence, and as a result, our customer list includes many of the UK's biggest building contractors, as well as roofing and cladding specialists, engineering companies and M&E contractors. We are often specified by architects and designers, and our services are recommended by brands like Kingspan and Tata.

“

We'll provide the answer to your roofing and cladding penetration requirements, from the complete weathering of complex details to the complete design, manufacture and installation of load-bearing upstands.

”

Our team will work with you to ensure the finished result meets your requirements in terms of functionality, appearance and cost, and all installations carry our comprehensive 25-year warranty.

25 Year Warranty

We believe in our solutions, our people and our techniques and so we are very proud to offer our industry leading 25 year warranty on all of our work, and solutions, giving you the peace of mind afforded by a solution designed, manufactured and installed to last.

We offer this leading warranty because here at Jones and Woolman UK we design and manufacture all of our solutions, using trusted materials and parts, so we are able to ensure from the very beginning our quality and craftsmanship are

second to none. Additional to this, our expert installation technicians are continuously trained in the latest techniques to ensure all of our solutions are installed to our exacting high standards.

And to ensure the customer comes first, our team is always on hand should you need anything throughout your project; from tweaks to the bespoke designs of your solution, specialist advice on your particular project, to aftercare support throughout the life of your solution.

40 Years in the Industry

In 2019 we celebrated 40 years as a successful business within the construction industry; as we continue to grow and expand our product offering, Jones and Woolman UK look forward to what the future holds, and applying our industry leading knowledge and expertise to your next project.

Excellence in Service

Here at Jones and Woolman UK, we are committed to providing the highest level of service. To ensure the best results possible, our team of fully trained expert fitters carries out all installations and post checks to ensure quality. We also continually review training procedures and fitting techniques to ensure we offer only the very best service to our clients each and every time.

Colour Match Service

Roof Penetrations

As experts in manufacturing and installing roof penetrations and weathering systems for the construction industry, the team at Jones and Woolman UK has extensive experience in designing, building and installing solutions that are both structurally sound and weatherproof.

We can manufacture and install load-bearing upstands to suit customer units, and our unique load-bearing curb system allows hatches, ventilation, rooflights and other building services.

Our flexible and dependable weathering system comprises a fibre-reinforced, cold applied liquid that can be used with any type of cladding and single-ply membrane roofs.

There is no restriction in size, shape or position in relation to the roof sheet profiles, and the system also allows for last-minute positional changes and enables ancillary equipment to be mounted and fixed either by our own team or others.

Vertical Penetrations

Vertical penetrations are one of the most difficult details in the industry, but as experts in weathering systems for the construction industry, the team at Jones and Woolman UK has extensive experience in designing, building and installing solutions that are both structurally sound and weatherproof.

We can design and fit weatherproof solutions for extremely complex cable trays and pipework, as well as dealing with any sort of ductwork or steel structure

that is required to pass in and out of the building.

Our flexible and dependable weathering system comprises a fibre-reinforced, cold applied liquid that can be used with any type of cladding or building system.

There is no restriction in size, shape or position in relation to the sheet profiles, and the system also allows for last-minute positional changes, allowing for additional services to be added at the last minute.

Service Risers

Wherever pipes or ducting enter or exit a building, the penetration can be prone to water ingress and other problems. This is particularly problematic for plant decks where services such as ducts and cable trays pass through the roof, this is what we call a service riser.

Here at Jones and Woolman UK, we have extensive experience in weatherproofing and securing the penetrations around service risers. We create safe and reliable covers and seals of any shape or size, including

clusters of multiple penetrations removing the requirement for 'dog kennel' style detailing, which can often have issues with planning permission within city centres.

Our solutions include in-situ weathering for service risers in existing buildings, and we can also work with clients to develop solutions for new-build projects.

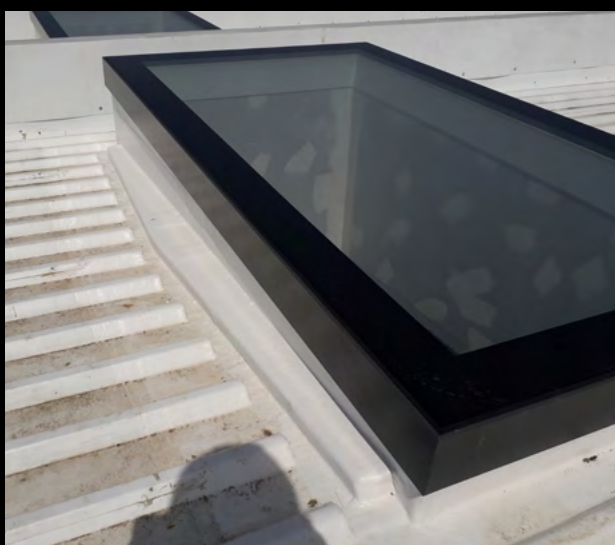

Commercial Rooflight and Window Installation

Commercial rooflight and window installations are excellent ways of providing natural lighting and ventilation, but unless they're installed correctly, they can also result in problems such as leaks, damp and draughts. We offer load-bearing upstands that can be custom made to suit project requirements, and our unique inclined

system allows rooflights and roof windows to be installed in all types of low-pitched roofs.

In addition, our specialist weathering system comprises a flexible, reinforced cold-applied liquid that is compatible with most types of cladding and single-ply roofs.

VELUX Commercial Modular Skylight Solutions

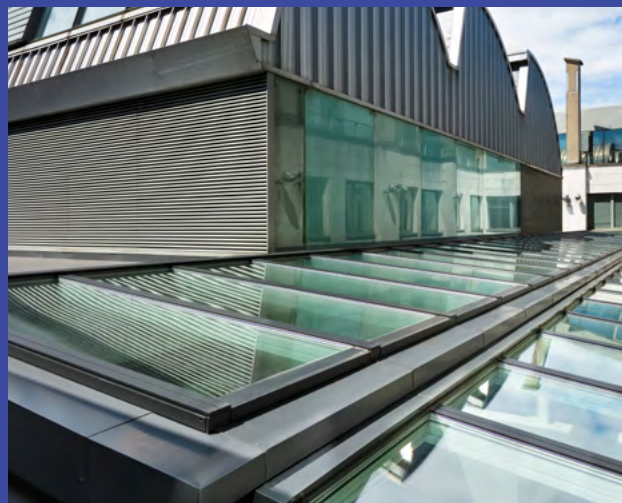

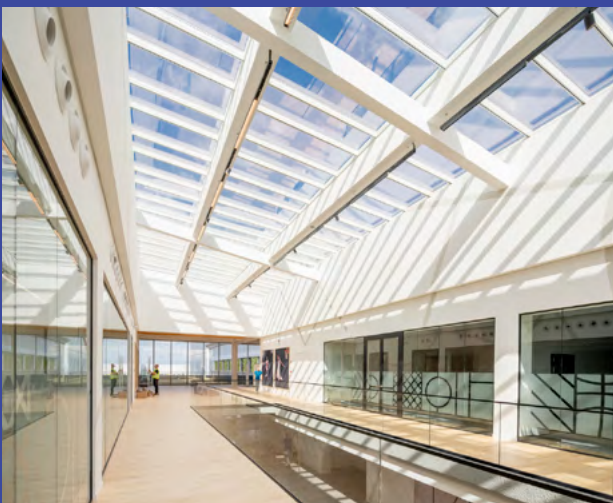

VELUX®
Commercial

Jones and Woolman UK's expertise and reputation has led to our involvement with VELUX Commercial for whom we have become a preferred installer of VELUX Modular Skylight solutions.

With over 40 years of expertise and putting our skills and knowledge into practice, Jones and Woolman UK install VELUX Modular Skylights to offer a unique single-source solution for commercial roofing projects.

With the correct sealing and finishing implemented, the VELUX Commercial solutions are installed to exacting standards. Jones and Woolman UK offer a 25 year warranty for peace of mind for the commercial building owner – a service unmatched by any other installer.

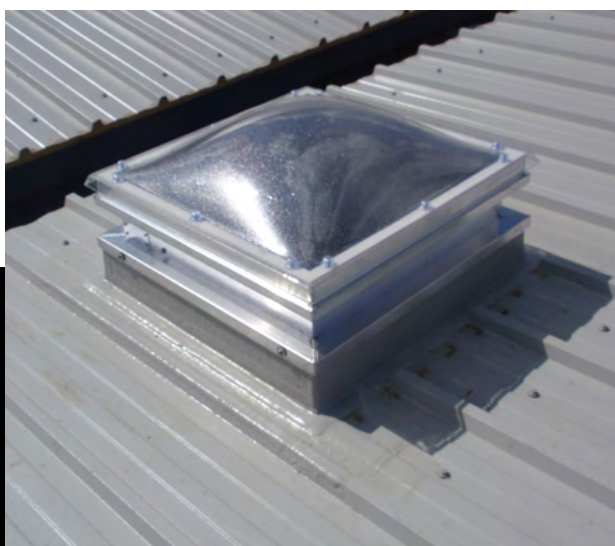

Our specialist weathering system comprises a flexible, reinforced cold-applied liquid that is compatible with all types of cladding and single-ply roofs.

Access Hatch and Vent Upstands

Roof access hatches and ventilation is an important consideration for most commercial projects since roof space is often used to house building services and plants. Provision of vents and adequate roof access is a must in these situations, but it's also important to ensure all penetrations are installed appropriately, and in a way that ensures they are weathertight.

Here at Jones and Woolman UK, we can make and fit load bearing upstands, enabling the successful and weatherproof installation of your roof vent or roof access hatches.

Access Hatches

Our unique inclined load-bearing upstand system allows access roof hatches to be installed in all types of roof. Hinged or removable panels are also available to fit vertical cladding and can be manufactured to suit your requirements.

We supply and fit a wide range of roof access units. Our standard product range includes Bilco hatches, as well as a range of aluminium hatches that can be supplied with your choice of polycarbonate domes or pyramids, and insulated flat aluminium lids.

In addition, we can provide bespoke large plant access panels, as well as weathering systems and covers for service risers.

Ventilation

Roof ventilation comes in a range of types and sizes, and many designs require an upstand to ensure proper functionality and weather tightness.

As experts in building penetrations and weathering systems, the team at Jones and Woolman UK has extensive experience in designing, building and installing roof ventilation upstands for commercial projects.

Within our solutions, our non-load bearing upstand is an ideal choice for both flues and ducts. Our load bearing upstand however, is more suited to natural air vents and is also fully compatible with the VELUX Modular Skylight system.

Depending on your requirements, upstands can be designed to be perpendicular to the floor or roof pitch, and our installation service includes weatherproofing, including drainage and water deflection.

Commercial Roof Repairs and In Situ Weathering

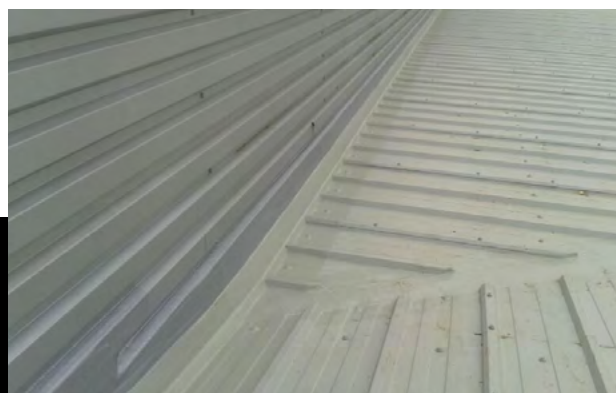

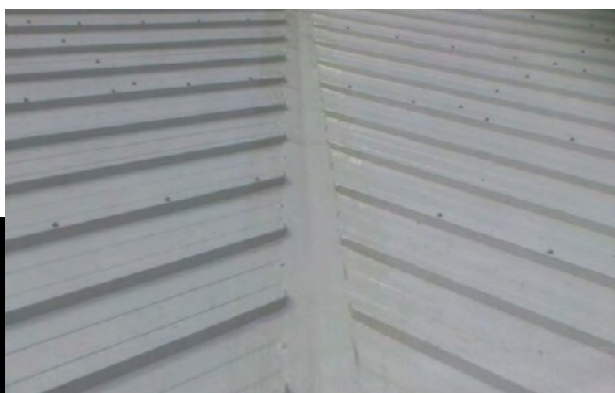

When a commercial roof is in need of repair, you'll want to get it fixed quickly and to a high standard. Weatherproofing is key, and many leaky roofs can be attributed to poor weathering around building penetrations.

Jones and Woolman UK offers a comprehensive commercial roof repair service, from identifying the source of leaks and diagnosing existing and potential failure points, through to carrying out the repairs and refurbishing elements like upstands and curbs.

As approved installers of cold-applied liquid waterproofing, we have extensive experience in repairing commercial roofs and our specially developed fibre-reinforced system is ideal for use on any roof, including flat and low-pitch roofs.

Valley gutters - where two opposite angled sloped roofs connect to create a 'V' shape - need specialist weatherproofing to ensure water doesn't accumulate during heavy rainfall and leak through to the building. Our seamless in-situ seal effectively weatherproofs a valley gutter to ensure effective water run-off no matter the severity of the weather. Because our solution is cosmetically discrete your valley gutters maintain an appealing finish that blends in seamlessly with the rest of your roof.

On any building, sheet laps can be problem areas - and on older roofs they can corrode. For further protection, or instead of re-sheeting the roof, we can supply an end-lap solution to extend the life of the roof.

Architectural GRP Mouldings

If you're looking for architectural mouldings, GRP fibreglass is an ideal material. That's because it lends itself well to the formation of complex shapes and curves – designs that are often unachievable in materials such as PPC steel or aluminium.

Here at Jones and Woolman UK, we have extensive experience in designing and building GRP architectural mouldings. We've created fascias, canopies, domes, column casings and decorative features for commercial

clients, with projects including office buildings, residential developments, shopping centres, factories and sports arenas.

We also offer bespoke upstands, made on site at our UK office and production facility, providing a weather-tight and attractive solution for roof penetrations.

GRP Linings

Widely used as a lining material, GRP lining is favoured due to its durability, versatility and cost-effectiveness.

Our GRP linings are strong, resistant to impact and chemicals, and provide a smooth and seamless appearance – and they're used for a variety of commercial purposes, from tanking and flooring through to covering pipelines and weather-proofing roofs.

Here at Jones and Woolman UK, our highly skilled team has extensive experience in designing and installing GRP

linings. We are approved installers of cold-applied liquid fibreglass roofs, and we've worked with a variety of clients to successfully install GRP solutions in projects across the UK and Ireland, as well as further afield.

We offer a comprehensive design and build service, ensuring the finished result matches all expectations. Custom-made GRP architectural mouldings such as upstands, curbs and fascias can be provided, and we also offer a 25-year warranty on all installations.

Fibreglass Roofs

GRP fibreglass or fibreglass roofs are a popular choice for flat roofs, as they provide a strong, reliable and weathertight surface.

Fibreglass is also an extremely versatile material that can be formed to exacting requirements, and colour matched to suit specific preferences. This means it is an ideal option for both new-build and refurbishment projects – commercial and domestic.

As approved installers of cold-applied liquid fibreglass roofs, Jones and Woolman UK can provide a complete

roofing service from initial site surveys through to the design and installation of the roofing system.

We can also supply and install GRP architectural mouldings and the required upstands and curbs for roof windows, roof lights, access hatches, service risers and other ancillary equipment.

Work is carried out throughout the UK, and Ireland, as well as further afield and all installations are covered by our 25-year warranty.
